*Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I) Claims 1-28 and 42-45, drawn to a WDM transmission system that is comprised of transmitters for transmission of optical signals, multiplexing of the optical signal, propagation of optical signals, demultiplexing of optical signals, and reception of optical signals. This is classified in class 398, subclass 79.
  - II) Claims 29-41, drawn to a multi network hub that is comprised of a plurality of boards, interfaces, switch circuits, transmitters, receivers, and processors. This is classified in class 398, subclass 164.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are unrelated because invention I is related to a WDM transmission system, wherein optical signals from different transmitters are transmitted, multiplexed, demultiplexed, and received by optical receivers. Invention II is related to a network hub for transmitting optical signals from a plurality of transceivers, wherein each transceiver has a board with network interfaces for connection to a network, and a switch circuit that is connected to the network interface, and a processor that is connected to the switch for controlling the switch. Inventions I and II are different because invention I does not have transceiver boards that each have a network interface for connection to a network, and a switch circuit on each board that is

connected to the network interface, and a processor that is connected to each switch for controlling the switch, and a bus that interconnects the processor of each board.

2. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

3. Because these inventions are distinct for the reasons given above and the search required for each group is not required for the other group, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mohammad R Sedighian whose telephone number is (703) 308-9063. The examiner can normally be reached on M-F (from 9 AM to 5 PM).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jason Chan can be reached on (703) 305-4729. The fax phone numbers for the organization where this application or proceeding is assigned is (703) 872-9306.
